

The Benefits of using Extender Products

CSI's UF515 High pH – Alkaline Extender and UF715 Low pH – Acidic Extender are companion products to their Ultraflex® Presoaks, Lubricants and Wheel Cleaners. Both products extend or boost the strength by increasing or decreasing the pH levels.

Frictionless cleaning in-bay, UF515 allows you the ability to customize the pH level for the desired level of cleaning needed for your customers. If you're having difficulties and challenges cleaning the organic solids and dirt on customer cars in your frictionless in-bay, adjust the level of UF515 upward until they're completely removed, you'll be cleaning like a pro!

Friction cleaning, UF515 will help you to remove brake dust and organic solids from the wheels of your customer's vehicles efficiently and extremely economically when utilized as part of a surfactant/boost system. You will get phenomenal cleaning results with our UF500 and UF515 combination at a fraction of the cost of most wheel cleaners.

In tunnel applications, UF715 can be used in a variety of applications. If you are experiencing city or softened water with high pH levels that are limiting your 'water break' as part of the rinsing process, then add UF715 into a pre-final rinse application. You'll be amazed at the 'water break' you can achieve and get your cars dryer and shinier, faster. You can also use UF715 as part of our MiraShield® Shine-Lo process in conjunction with any of our low pH presoaks or polishes to decrease the pH surface level on the vehicle paint surface and create an unsurpassed shine for your customers.

Product features:

Customize the
pH level

Remove brake dust
and organic solids
from wheels

Use in a variety of
applications

Achieve
"Water Break"!
