

EXTENDER PRODUCTS

ADD MUSCLE TO YOUR VEHICLE CLEANING

Customize pH level

Use in a variety of applications

UF515 High pH Extender

Increases the total alkalinity of the presoak

UF515 allows you the ability to customize the pH level for the desired level of cleaning. It removes brake dust and organic solids from wheels efficiently and extremely economically when utilized as part of a surfactant/boost system.

UF715 Low pH Extender

Lowers the pH level of any acidic based product

UF715 allows you to manage city or "softened water" that limits water break in the rinsing process. Simply add UF715 into your pre-final rinse application.

Also, when used in conjunction with any Lustra® low pH presoaks or polishes it will decrease the pH of the vehicle surface and create an unsurpassed shine.
